

Here's How To Protect Your Car from Rats During Monsoons

With a fresh climate, the monsoons also bring unwanted guests into one's car – Rats. These rodents are well known to find their way into car hoods in search of warmth and dryness; in so doing, they become a real menace to the car. Nichem Solutions' 'No Entry XL,' an anti-rat spray for cars, is strong and guards cars from those notorious rats. Here are some of the best ways to avoid rat menace during the monsoon and have your vehicle in perfect condition.

Comprehending Why Rats Love Cars

Automobile engines attract rodents through different factors. The warmth and protection offered by the engine compartment make it the perfect location for rats to inhabit. Also, wires and insulations are common commodities because rats find them extensively suitable to nib on. This happens because the areas where they nib in other seasons become unsuitable for their survival in monsoons. As a result, they enter car engines and cause havoc that demands substantial repair costs.

Signs of Rat Damage in Cars

Before knowing how to prevent rats from entering cars, it is crucial to identify if these creatures have caused damage to your vehicle. Some of the common signs of rat presence are as follows:

1. Nibbed wires and insulation
2. Rat droppings in and around the engine
3. Weird noises during the night
4. Foul odors from the car

It is essential to identify the problems mentioned above and deal with them well in advance.

Nichem Solutions' Rat Spray for Cars: One-stop Solution

Using a rat-repellent spray for cars is a logical method to keep these gnawing pests away from your vehicle. 'No Entry XL' is a suitable and effective solution developed by Nichem Solutions. The anti-rat spray for cars forms a shield that denies easy access to rats into the engine compartment. The shield is long-lasting and does not wear off simply, making it the perfect choice for protecting cars during the rainy season.

Among all the available products Nichem Solutions offers, 'No Entry XL' can be defined as a somewhat effective rat prevention option. It is simple to use, and the films give good, lasting protection. It is non-acrid in formulation, making it safe for use in the car and the environment. Nichem's rat spray for cars creates a wall that seals the entire engine compartment, thus keeping rats from entering the engine.

Here is How to Apply Nichem's Rat-repellent Spray

The first step is to ensure the engine is clean and free from any kind of litter. Then, you must apply the anti-rat spray evenly throughout the engine compartment. It would be best to leave it to dry so it can form a protective layer over the engine. Lastly, you can reapply the product on the engine as the manufacturer recommends to continue protecting your car.
